# Background

- Teaming Effort in 2002
- Defined High Level CSS Procedures
- Get ahead of the game before Software and Integrator Selection / $ Spent

# Purist View of the OA

- Supported Unit could only request support – not visualize CSS procedures, CSS resources

- CSS tasked All MAGTF Logistics resources

- Possible large migration of logistics resources to CSSE

- Single Logistics POC in CSSE HQ (G-3) "Super CSSOC"

# Current Assumptions

- MEF organizations will not change substantially before GCSS-MC is fielded.
- CSS capability will continue to be tailored.
- Supported units <u>will</u> retain organic logistics capability (including intermediate level maintenance at the battalion level).
- All elements of the MAGTF need to see and manage organic Logistics capacity
- Supported / Supporting unit relationships (DS and GS) will apply both deployed and in garrison.

# Tactical OA Framework

- Describes in greater detail how future MAGTF Logistics will work.

- Foundation for software requirements - outlines how GCSS-MC will look in the MAGTF.

- Three workshops conducted, more to follow

# MAGTF Implementation

- ACE/GCE/CE
  - Manage Requests
  - Manage Organic Logistics Capacity
  - Task and Schedule Organic Log Resources
  - Input Logistics Task Completion/Status
- CSSE
  - All the above, plus
  - Manage Logistics Orders
  - Synchronizes MAGTF logistics resources to support MAGTF Commander's priorities
  - Manages external MAGTF logistics support

# Key Take Aways

- Define next level details on how logistics will work in the MAGTF
- No longer a Purist view.
- GCSS-MC will involve the entire MAGTF in tactical logistic procedures
- Shaping the way ahead for fielding GCSS-MC to the MAGTF

# QUESTIONS??
